

Sensi-Touch Single Key Defogger

Guide for Medicine Cabinets & Mirrors

What It Is

The **Sensi-Touch Single Key Defogger** is an integrated, one-button capacitive touch control that activates the mirror's built-in anti-fog heating pad — keeping the reflection clear during and after hot showers.

Designed for seamless integration across our entire line.

How It Works

- Hidden **capacitive touch sensor** behind the mirror
- Activates low-wattage heating pad bonded to mirror surface
- Gently warms glass to prevent condensation buildup

No external switches. No visible hardware. Clean, modern aesthetic.

Key Features

- ✓ Single-key activation
 - ✓ Soft backlit touch indicator
 - ✓ Even heat distribution
 - ✓ Energy efficient operation
 - ✓ Seamlessly integrated into mirror design
-

Operation Instructions

1. Ensure unit is properly powered.
2. Lightly tap the Defogger button.
3. Indicator light turns on.
4. Defogger activates immediately.
5. Tap again to turn off.

Turn on 3–5 minutes before or at start of shower for best results.

Technical Overview

- Voltage: 120V hardwired
- Heating Element: UL-recognized defogger pad
- Wattage: Low energy consumption
- Activation: Capacitive touch sensor
- Protection: Designed for bathroom humidity environments

Installation Notes

- Hardwired by a licensed professional
- Mirror must be mounted before testing
- Do not cut or modify internal heating element

Maintenance

- Clean with ammonia free glass cleaner and no vinegar
- Avoid abrasive materials
- Do not apply excessive pressure over heating area

Ideal For

- Primary bathrooms
- Luxury residential projects
- Hospitality applications
- High-humidity environments
