

# Sensi-Touch Double Key Switch Guide (DOD-100)

## Power & Dimming Button

- Tap once to turn LED lighting ON.
- Tap again to turn lighting OFF.
- Press and hold to dim or brighten the LED lights.
- Release at your desired brightness level.
- System remembers the last brightness setting.

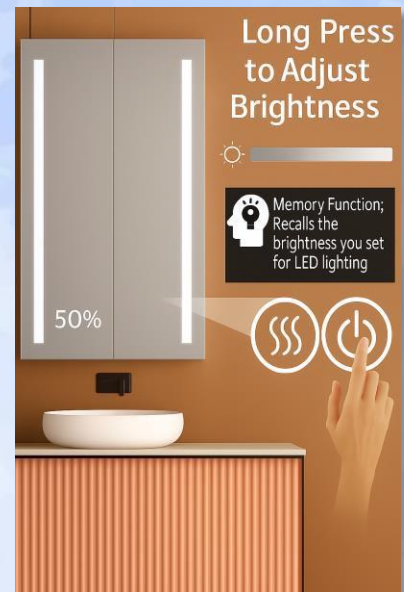

## Defogger Button

- Tap once to activate the defogger.
- Defogger automatically shuts off after 1 hour.
- Tap again to manually turn it off at any time.

## Tips for Best Use

- Activate defogger a few minutes before showering.
- Avoid touching switches with wet hands.
- Ensure all electrical connections are installed by a licensed professional.

## **Operating Tips**

To ensure proper operation of your cabinet lighting and touch controls, please follow the instructions below:

### **Power Activation (On/Off Function):**

- The cabinet is equipped with a touch-sensitive power switch.
- Lightly touch the designated power icon to turn the lighting system ON or OFF.
- A short touch (not a press) is all that is required to activate the control.

### **Proper Use of Touch Sensor:**

- Use a clean, dry fingertip when operating the touch sensor.
- Do not use excessive force—firm pressure is not necessary.
- Ensure hands are free of water, lotion, or oils for best responsiveness.

### **Important Notes:**

- The touch sensor is capacitive and responds to natural skin contact.
- If the sensor does not respond, ensure the unit has power and the surface is clean and dry.
- Avoid using sharp objects or any non-skin materials to activate the controls.

### **Best Practice:**

For consistent performance, operate the touch controls with a quick, deliberate tap rather than prolonged contact.
